Abstract

This report provides a brief overview of two elements of the mobile operator's network:

- Backhaul: The connection between the baseband units and the EPC.
- Fronthaul: The connection between remote radio heads/units (RRHs/RRUs) and baseband units.

From these basic definitions emerge great complexity, particularly when the variations on each type are described. This report is offered as a primer to those more detailed topics that *iGR* has covered or will cover in existing or future reports.

Key questions addressed in this study:

- What is backhaul? What is fronthaul?
- What are the common backhaul technologies?
- What are small cells? What is the heterogeneous network?
- What is a metrocell? What is a remote radio head? What is the key difference between the two?
- What is CPRI?
- What are some of the basic requirements for backhaul and fronthaul?
- What companies provide fiber services?

This report is recommended for:

- Mobile operators, particularly those servicing the U.S. market
- Mobile backhaul providers, including telcos and cable MSOs
- Wired and wireless backhaul vendors and solution providers
- Mobile OEMs, particularly those servicing the U.S. market
- Wired and wireless infrastructure vendors, particularly those servicing the U.S. market
