Five new *iGR* studies provide overviews of the mobile markets of the world's regions

Each market study provides five-year forecasts for multiple mobile industry areas

AUSTIN, Texas, March 8th, 2018 – Mobile subscribers worldwide increasingly depend on a variety of mobile devices, including smartphones, tablets and even connected cars in some markets, to stay connected. At the same time, these mobile consumers are increasing their usage of mobile data. Although many general similarities exist between the mobile markets of the five regions, each global region also has its own distinct mobile trends.

In order to consolidate all of the mobile data for each global region, *iGR*, a market research consultancy focused on the wireless and mobile industry, has created five new market studies that define each global region's mobile market. The five market studies cover the regions of Asia-Pacific, Europe, Latin America, Middle East and Africa, and North America.

"*iGR* realized that it would be beneficial to look at each region holistically," said Iain Gillott, president and founder of *iGR*. "By combining the information from our many global studies, we were able to provide an overall view of each global region's mobile market."

Each study describes a region's mobile market and provides a five-year forecast for the following areas of the market:

- Mobile Connections
- Smartphone Sales
- Tablet Sales
- Mobile Data Traffic.

The new *iGR* studies include:

[Asia-Pacific Wireless Statistics Forecast, 2017-2022](#)

[Europe Wireless Statistics Forecast, 2017-2022](#)

[Latin America Wireless Statistics Forecast, 2017-2022](#)

[Middle East and Africa Wireless Statistics Forecast, 2017-2022](#)

[North America Wireless Statistics Forecast, 2017-2022](#)

The following key questions are addressed in the new research studies:

- What is the population of the region and what is its mobile penetration?
- How many mobile connections exist and how are they expected to grow between 2017 and 2022?
- What is the split of those connections by technology type (GSM, CDMA, UMTS/HSPA, LTE and 5G) and generation (2G, 3G, 4G and 5G)?
- What are the anticipated global handset and smartphone sales for the next five years?
- What are the anticipated tablet sales for the next five years?
- What are the mobile data traffic trends of the region's major operators?
- What is mobile data usage today and at what rate is mobile data usage expected to grow over the forecast period?
- How does mobile data usage differ between quartiles?

The information in these five studies will be valuable for:

- Mobile operators
- Device OEMs
- Mobile infrastructure and equipment OEMs
- Content providers and distributors
- Financial analysts and investors.

The new reports can be purchased and downloaded directly from *iGR's* website using the above links or at www.iGR-inc.com. Alternatively, contact Iain Gillott at (512) 263-5682 for additional details.

About iGR

iGR is a market strategy consultancy focused on the wireless and mobile communications industry. Founded by Iain Gillott, one of the wireless industry's leading analysts, in late 2000 as *iGillottResearch*, *iGR* is now in its eighteenth year of operation. *iGR* continuously researches emerging and existent technologies, technology industries, and consumer markets. We use our detailed research to offer a range of services to help companies improve their position in the marketplace, clearly define their future direction, and ultimately improve their bottom line.

iGR researches a range of wireless and mobile products and technologies, including: smartphones; tablets; mobile wearable devices; connected cars; mobile applications; bandwidth demand and use; small cell and het-net architectures; mobile EPC and RAN virtualization; DAS; 5G; LTE; VoLTE; IMS; IMT-2020; NFC; GSM/GPRS/UMTS/HSPA; CDMA 1x/EV-DO; iDEN; SIP; macro-, pico- and femtocells; mobile backhaul; WiFi and WiFi offload; and SIM and UICC.
