New *iGR* study models 5G revenues in Asia Pacific over a five-year period

iGR's model includes 5G revenues from six potential sources

AUSTIN, Texas, June 24th, 2021 – 5G has arrived in the Asia Pacific region. Several major mobile operators have launched networks using the non-standalone 5G NR standard, and 5G mobile phones are readily available for mobile consumers in the region. The industry is looking forward to using 5G's capabilities to provide faster speeds to consumers and to support many use cases.

Because a significant amount has been invested to make 5G a reality in the Asia Pacific region and will continue to be invested for many years, it is important to look at the revenues that can be generated with the new technology. *iGR*, a market research consultancy focused on the wireless and mobile industry, has just released a new market study that provides a five-year forecast for potential 5G revenues from six different sources: mobile broadband service, IoT, fixed wireless access, advertising, entertainment services and gaming.

"Even though the mobile operators in the Asia Pacific have been the investors in the 5G network, the revenue generated from the 5G ecosystem will be spread among many global entities," said Iain Gillott, president and founder of *iGR*. "Mobile consumers' spending will benefit content providers, cloud providers, gaming developers, and advertisers, as well."

iGR's market study, [**Asia Pacific 5G Revenues, 2020-2025: How much and where will mobile consumers spend?**](#), provides a five-year forecast for potential 5G revenue. The potential revenues provided by mobile, IoT, fixed wireless access, advertising, entertainment and gaming services are presented separately. This market study also provides information about 5G and the status of several major Asia Pacific mobile operators' 5G networks.

The following key questions are addressed in the new study:

- What is 5G and some of its expected use cases?
- How many 5G connections can be expected in Asia Pacific from 2020 to 2025?
- What are potential sources of revenue for 5G networks?
- What is the 5G mobile subscription service model and how much revenue will be generated?
- What is the business model for 5G IoT and how much revenue will be generated?
- What is 5G fixed wireless access and how much revenue can be generated by the service?

- How will 5G advertising generate revenue and how much can be expected?
- What is the model for 5G-based entertainment services? How much revenue will it provide?
- What is the model for 5G-based gaming? How much revenue will it provide?
- How does each source of 5G revenue compare? Which is the most significant?
- What are the total revenues expected from the 5G ecosystem from 2020 to 2025?

The information in this market study will be valuable for:

- Mobile operators
- Mobile device OEMs
- Mobile service and application developers
- IoT vendors and solutions providers
- Infrastructure OEMs
- Financial analysts and investors.

About *iGR*

iGR is a market strategy consultancy focused on the wireless and mobile communications industry. Founded by Iain Gillott, one of the wireless industry's leading analysts, in late 2000 as *iGillottResearch*, *iGR* is now in its twenty-first year of operation. *iGR* continuously researches emerging and existent technologies, technology industries, and consumer markets. We use our detailed research to offer a range of services to help companies improve their position in the marketplace, clearly define their future direction, and ultimately improve their bottom line.

iGR researches a range of wireless and mobile products and technologies, including: 5G, 4G LTE, smartphones, tablets, connected cars, V2X and V2V, mobile applications, bandwidth demand and use, 5G small cell and het-net architectures, 5G new core virtualization, mobile EPC and RAN virtualization, edge computing, in-building wireless, CBRS, mmWave, spectrum farming, DAS, VoLTE, macro-, pico- and femtocells, mobile front/backhaul, WiFi and WiFi offload, and enterprise private LTE / 5G.
