**Mobile Device Security Report and Forecast**  
***iGR* finds smartphones likely prime target for attacks**

**AUSTIN, Texas, November 3, 2010** – *iGR*, a market strategy consultancy focused on the wireless and mobile industry, today announced the availability of a major new study sizing and forecasting the global market for mobile device security solutions. As the extensive and comprehensive report details, *iGR* expects the total global spending on mobile device security to grow at a compound annual growth rate over the forecast period (2011-2014) of more than 15 percent.

“Although the mobile device security market is still in its infancy,” said Matthew Vartabedian, research vice president at *iGR*, “increasing amounts of storage and processing power suggest that mobile devices are likely to become prime targets as early as the first half of 2011.”

The more than 50 page report provides detailed forecasts for each major global region – North America, Latin America, Europe, Asia-Pacific, Japan and the Middle East / Africa. The report also provides an overview of the potential security risks and the potential countermeasures that consumers, governments and enterprises can implement to defend against the potential risks.

As the report discusses, the mobile device security market looks set to begin a steady growth climb, though not uniformly in all regions and all technologies. For example, Asia Pacific is likely to see an increasing growth rate than in North America where the rate of growth is nearly consistent over the forecast period. There are a number of factors that make each region the size that it is and exhibit the anticipated growth rates: e.g., population, state of the economies within the regions and penetration of each smartphone operating system.

For details on how to obtain a copy of the report, please contact Matthew Vartabedian at (708) 387-0475 or mattv@igr-inc.com.

**About *iGR***

*iGR*, formerly *iGillott*Research Inc., is a market strategy consultancy focused on the wireless and mobile communications industry. Founded by Iain Gillott, one of the wireless industry's leading analysts, we research and analyze the impact new wireless and mobile technologies will have on the industry, on vendors' competitive positioning, and on our clients' strategic business plans.
